

MADHVI JHA

Business Analyst | Product Manager | Business Intelligence & Data Analytics | AI Automation

Hong Kong | jha.madhvi001@gmail.com | +852-5301-6416 | +91-8527249587 | [linkedin.com/in/madhvi-jha](https://www.linkedin.com/in/madhvi-jha) | github.com/Mad-16

PROFESSIONAL SUMMARY

Business Intelligence and AI-driven professional with 9+ years turning complex data into decision-ready products across aviation, retail, consulting, and banking. Proven track record owning end-to-end delivery — from requirements discovery and stakeholder alignment through Power BI/DAX dashboard delivery and SQL-driven reporting — as a hands-on Business Analyst and Product Owner. Builds and ships self-directed AI projects, including a fully local, privacy-first AI document Q&A system (Ollama + Gemma) and AI-assisted SAP data automation that cut manual processing time from hours to seconds. Combines strong stakeholder management, negotiation, and data storytelling with hands-on technical depth in Power BI, SQL, ETL, and applied Generative AI — equally effective in Business Analyst, Product Manager, BI Developer, or Data Analyst roles.

CORE SKILLS

Business & Product Analysis: Requirements Gathering & Prioritization, Roadmap Planning, Stakeholder Management, Cross-Functional Leadership, UAT & Quality Strategy, Negotiation, Data Governance, Business Consulting, Data Storytelling

Data & BI: Power BI, DAX, Advanced SQL (Joins, Complex Queries), Data Modeling, ETL (SSIS, Xtract Universal), Microsoft Fabric (working knowledge), Databricks (working knowledge), SAP, POS Systems

AI & Automation: Generative AI, Prompt Engineering, AI-Assisted Process Automation, Local LLM Deployment (Ollama, Gemma), Document Q&A / Knowledge Base Systems, Conversational AI / Chatbot Design (Voiceflow), Python (Flask), VBScript

Business & Financial Analysis: CAPEX/OPEX Management, Cost Optimization, Financial Reporting, P&L Analysis, Forecasting & Budgeting, Inventory & Supply Chain Analytics, Loyalty Program Analytics

FEATURED AI PROJECT

SecureKnowAI — Private, Local AI Document Q&A & Knowledge Base System

Independent Project · Jun 2026 – Present · github.com/Mad-16/ai-enterprise-data-extraction

- Designed and built a working local AI system (Ollama + Gemma) that lets users upload multiple documents (PDF, Excel, CSV) and get accurate answers with source traceability — fully offline, with no data leaving the device.
- Owned the product end-to-end: defined the Document Upload → Processing → AI Search → Knowledge Base → Q&A architecture, then built and iterated on the working pipeline solo, testing across multiple local documents and formats.
- Solved cross-file, cross-format retrieval so users get correct answers without needing to know which document holds the information.
- Built a Flask-based web interface for document upload and management (add, remove, clear) and added a document-summarization mode alongside Q&A search.
- Built as a privacy-first alternative to cloud AI tools for individuals and small businesses that want to keep sensitive documents local, with the architecture designed to extend toward larger deployments.

PROFESSIONAL EXPERIENCE

Business Intelligence Analyst (Business Analyst & Product Owner — Reporting Platform)

Hongkong Aero Engine Services Limited (HAESL) — Hong Kong

Sep 2024 – Jun 2026

- Owned end-to-end delivery of the Power BI reporting platform for the Rolls-Royce engine maintenance account — from requirements discovery through deployment — as sole business analyst and product owner, consistently shipping on schedule.
- Led requirements gathering and prioritization across engineering and finance stakeholders, translating complex SAP/SQL datasets into a reporting roadmap for both technical and business audiences.
- Directed ETL/data pipeline strategy (SSIS, Xtract Universal) and data modeling to ensure reliable, analysis-ready inputs for downstream BI reporting.
- Defined and tracked KPIs (engine performance, turnaround time, cost efficiency) in Power BI/DAX to guide dashboard iteration and prioritization.
- Applied AI-assisted automation (VBScript via Xtract Universal jobs) to pull large SAP tables (e.g. MARC, MARA) into SQL in seconds instead of hours of manual work.
- Acted as primary liaison between client and internal stakeholders — negotiating scope, aligning priorities, and managing delivery timelines.

- Identified and drove adoption of cost-saving solutions, reducing unnecessary expenditure in engine maintenance operations.

Billing and Data Analyst (Business Analyst — Product Requirements & Delivery)

Lululemon — Hong Kong

Jun 2022 – Jun 2023

- Owned requirements gathering and delivery for CAPEX and open-cost tracking tooling across store portfolios, ensuring financial transparency for stakeholders.
- Defined and shipped a Power BI reporting product combining inventory, supply chain, and finance data, giving management real-time visibility into CAPEX/OPEX for new store openings across APAC.
- Ran stakeholder discovery across finance, supply chain, and store operations to translate business needs into product requirements and delivery priorities.
- Coordinated cross-functional logistics and readiness workstreams for new store launches across the APAC region.
- Delivered P&L dashboards and forecasting models supporting store-expansion decisions.
- Partnered with finance teams to optimize operational and capital expenditure planning through data-driven insights.

Business Data Consultant (Product & Governance)

Explora — Hong Kong

Mar 2022 – Jun 2022

- Defined a data governance framework and led Power BI product rollout to standardize reporting practices across stakeholders.
- Delivered structured analytics and insight products to support business stakeholder decision-making.

Power BI Developer / Business Analyst / Project Lead

Tata Consultancy Services (TCS) — India

Jan 2017 – Mar 2022

- Owned BI product delivery for enterprise clients including Citi Bank, Microsoft, Walgreens, and Arval, leading cross-functional teams end-to-end.
- For Walgreens, defined requirements and delivered a loyalty-program analytics product surfacing customer and rewards insights for business stakeholders.
- Owned UAT and quality strategy for POS payment terminal (PIN pad) functionality, validating reliability ahead of store rollouts.
- Designed data models and led SQL-based extraction and transformation for enterprise reporting products.
- Led BI project delivery — coordinating cross-functional stakeholders, managing scope, and ensuring on-time releases aligned to business needs.

EDUCATION

B.Tech in Information Technology — GL Bajaj Institute (AKTU), India | 2012 – 2016
